

Instructions for Administration:

16 & 17 Months Old

Definitions

2.1 Gross Motor

Notes If the child does not perform the gross motor item for their age, but performs a more advanced gross motor item, then the item specific for their age is considered normal.

2.1.3	Can stand up from floor independently	Age: 15 - 17 months
Materials	None	
Instructions	Sit the child on the floor. Show an attractive toy at a higher level so that the child has to stand to get it.	
Response	Observe if the child stands up from floor without any support.	
Grading	Present Partially Attempts No attempt	

2.2 Fine Motor Items

Note If the child does not perform the fine motor item for their age, but performs a more advanced fine motor item, then the item specific for their age is considered normal.

2.2.3	Precise release of a tiny object into a small container	Age: 15 - <30months
Materials	Rice Bubble, Wooden Cube with 2.5cm diameter opening	
Instructions	Sit the child on a child's seat. Place a rice bubble and the wooden cube with the 2.5cm diameter mouth facing up in front of the child. Ask the child to "put it in the hole". 	
Response	Observe the child release the rice bubble into the hole.	
Grading	Present Clumsy release Attempts, but unsuccessful release No attempt	

2.3 Vision Items

Notes When smarties or 100s & 1000s are required for Vision items, select colours that contrast with the green cloth.

- Use: Yellow, Orange, Red
- Avoid: Green, Blue, Purple

Near vision and watching adults are evaluated separately, but only near vision is considered for the scoring of domain severity. When scoring vision of the child, fixation on objects placed on the tabletop is considered normal response.

2.3.1	Watches moving adult from 3 metres	Age: 12 - <36 months
Materials	None	
Instructions	Stand in front of the child at a distance of 3 metres and draw their attention. Move along an arc around the visual field of the child and observe if the eyes move to track the moving adult. If no response, keep coming closer and observe the distance at which the child's visual attention is engaged.	
Response	Watches moving adult from 3 metres.	
Grading	Present From 2m From 1m From <1m	

2.3.2	Fixates on 100 & 1000 from 30cm	Age: 12 - <36 months
Materials	1 100s & 1000s, Green Cloth If no response to 100s & 1000s: Smartie, Yellow Block, Red Ball on String, Compact Mirror, Torch	
Instructions	The child is seated supported upright in the caregiver's lap at a table, which is covered with a green cloth. Show the 100 & 1000 (a <3mm sized sweet) to the child and say "Ooh! Look at this beautiful thing". Place the 100 & 1000 on one side of the table keeping the gaze of the child on it. Then, sweep your hand across the table holding the 100 & 1000, and release it at some point during the sweep of your hand across the table. Observe whether the child fixates their gaze on the released object or not. If no response, test with a smartie; then with a 2.5 cm block; then with the 6cm spinning red ball on string; then with a reflecting object; then a torch beam.	
Response	Child fixates gaze on the 100 & 1000 from 30cm	
Grading	Present Can see non-reflected object of 1.5cm (e.g., Smartie) Can see non-reflected object of >1.5cm (e.g., 2.5cm block) Perceives bright light or reflecting object	

2.4 Hearing Items

Note Soft whisper - 10 to 25 db; conversational speech - 25 to 55 db; crying baby - 55 to 65 db; rattle - 60 to 80db.

2.4.1	Distraction test above ear level – Rattle	Age: 12 - 23 months
Materials	Rattle, Assistant, Any Soundless Toy	
Instructions	The child is seated on the caregiver's lap, supported upright. The examiner is the 'distractor' who sits in front of the infant at a distance of 1 to 2 metres. The assistant stands behind the caregiver and the child to provide a sound stimuli. The distractor encourages the child's attention towards themselves by lightly playing with a 'soundless' toy, then swiftly putting it out of sight as a signal to the assistant to start the sound stimulus (rattle). The sound stimulus is the rattle, which is produced from a distance of 1 meter, above the child's ear level and outside of their range of vision. The test is done in turn on each side of the child.	
Response	The child will turn their head and visually locate the source of the sound, equally on both sides.	
Grading	Present Questionable To loud rattle only No response	

2.4.2	Distraction test above ear level – Voice	Age: 12 - 24 months
Materials	Assistant, Any Soundless Toy	
Instructions	The child is seated on the mother's lap, supported upright. The examiner is the 'distractor' who sits in front of the infant at a distance of 1 to 2 meters. The assistant stands behind the caregiver and the child to provide a sound stimuli. The distractor encourages the child's attention towards themselves by lightly playing with a 'soundless' toy, then swiftly putting it out of sight as a signal to the assistant to start the sound stimulus. The sound stimulus is the assistant's voice, which is produced from a distance of 1 meter, above the child's ear level and outside of their range of vision. The test is done in turn on each side of the child. 	
Response	The child will turn their head and visually locate the source of the sound, equally on both sides.	
Grading	Present Questionable To loud voice only No response	

2.5 Expressive Language Items

Note This domain relies primarily on observation of child vocalisations during the session:

- The examiner must be vigilant in listening for and recording the child's vocalisations throughout the assessment to ensure accurate scoring of the items.
- Interact and speak with the child to encourage vocalisations. You may wish to use real objects or pictures in story books and ask the child to name the objects.
- If no vocalisations are made throughout the assessment, ask the caregiver if this is typical as it is not uncommon for young children to behave differently in new and unfamiliar situations. Document specific examples of vocalisations reported by the caregiver on the record form.

2.5.3	Two meaningful single words e.g., familiar objects	Age: 16 - 17 months
Materials	None	
Overview	This item is similar to item 2.5.2 except that at least two words should be used meaningfully by the child. These words may be discrete. Verbs such as “give” and “take”, if used meaningfully, should also be considered.	
Instructions	Note at least two meaningful words during any point of the assessment	
Response	The child uses any two words meaningfully.	
Grading	Present One meaningful word Repeats on hearing the word Repetitive babble in string ('ba ba ba ba')	

2.6 Cognition Items

2.6.6	Large peg in hole	Age: 16 - 17 months
Materials	Peg Board	
Instructions	Place all six pegs in the peg board, holding it in your lap or under the table so that the child does not see you insert them. Place the peg board on the table directly in front of the child and within their reach. While the child watches, remove the pegs one at a time and place them between the child and the peg board, perpendicular to the pegboard. Point first to the pegs and then to the holes and say "Put them in the holes, put them all in".	
Response	The child puts all six pegs into the holes.	
Grading	Present 1 or 2 pegs only (does not complete) Attempts (takes the peg) Does not try	

2.6.7	Identify one body part	Age: 16 - 17 months
Materials	None	
Instructions	Ask the child "Where is your nose?" and / or any other body parts. If no response, repeat four to five times.	
Response	The child can identify at least one body part by pointing.	
Grading	Present With repeated prompting (>3 times) Identifies incorrect body part Does not follow instruction	

2.7 Behaviour Items

Note Observe and record the child's behaviour according to the activities listed under this domain.

2.7.1	Sleep / awake rhythm	Age: 12 - 24 months
Materials	None	
Instructions	Ask the caregiver about the child's sleep patterns.	
Response	Score according to caregiver's recall. By age 1 year, there are still 10% of infants waking every night by the age of 1 year, but by this age the great majority have established a stable pattern of sleep and wakefulness with a long sleep at night and a nap in the morning and afternoon. Mild, moderate and severe grades of response are: occasional disturbance, considerable disturbance, or constant problem, respectively. Either the child is sleeping too much or is awake for longer periods of time.	
Grading	Normal sleep patterns Occasional disturbance Considerable disturbance Constant problems	

2.7.2	Displays positive affect most of the time	Age: 12 - 24 months
Materials	None	
Instructions	Note the child's affect.	
Response	The grading is done according to the degree of negative affect displayed during the assessment. Positive affect comprises of smiling, laughing, sound making that is perceived as the expression of excitement, happiness or pleasure. Negative affect includes fussing, pouting, whining, crying, vocal or physical expressions of anger.	
Grading	Displays positive affect Sometimes negative Mostly negative Constantly negative	

2.7.3	Displays normal periods of quietness	Age: 12 - 23 months
Materials	None	
Instructions	This item tests the child's quietness. Few children are so quiet that they are very unresponsive.	
Response	The child is quiet, responsive, not restless.	
Grading	Displays normal periods of quietness Placid/Quiet Unusually Quiet Extremely Quiet	

2.7.4	Displays responsiveness to surroundings	Age: 12 - 23 months
Materials	None	
Instructions	Note the child's responsiveness. Observe if infant engages in visual, auditory, oral, or physical exploration. For example, trying to touch or hold objects.	
Response	Degree of responsiveness is noted and a curiosity towards new stimuli within the environment is normal.	
Grading	Present Most of the time Infrequent Never	

2.7.5	Good eye contact	Age: 12 - <36 months
Materials	None	
Instructions	Note the frequency of eye contact the child makes with the examiner.	
Response	The infant should be making eye contact with persons interacting with them.	
Grading	Present Most of the time Infrequent Never	

2.7.6	Good attention to tasks	Age: 12 - <36 months
Materials	None	
Instructions	Observe the child's focused attention and concentration towards a particular activity. Some children might have attention deficits or attention deficit / hyperactivity disorders that might express themselves at an early age.	
Response	The child displays good attention to tasks during the assessment.	
Grading	Present Most of the time Poor attention but not hyperactive Poor attention and hyperactive	

2.8 Seizure Item

Note Seizures which occurred in the neonatal period (first 28 days) are not considered in the rating of seizures after that period.

2.8.1	Seizures (provoked or unprovoked)	Age: 12 - <36 months
Materials	None	
Instructions	Ask caregiver or check medical records to determine whether child has ever experienced a seizure. Seizures are manifestations of neuronal injury due to excessive electrical activity in the brain. Any disturbance in the brain may cause seizures, which may be single or repetitive, and involves a sudden change in behaviour.	
Response	Consider typical if the child has not had a provoked or unprovoked seizure.	
Grading	No seizures (provoked or unprovoked) One or more than one typical febrile fit in the past year One or more than one unprovoked seizure/atypical febrile fit in past year More than one unprovoked seizure/atypical febrile fit in the past week
