Accessing RedCap

RedCap is a database system used for storing and accessing participant data. The database used in the Tracking Cube also performs numerous calculations to produce meaningful outputs to help guide patient care.

1. To access the system go to: https://www151.griffith.edu.au/redcap/

2. Login using the “Griffith Sign On” button (highlighted by the red box in the image below.

3. Enter your sNumber and Password into the Giffith Single Sign-On page

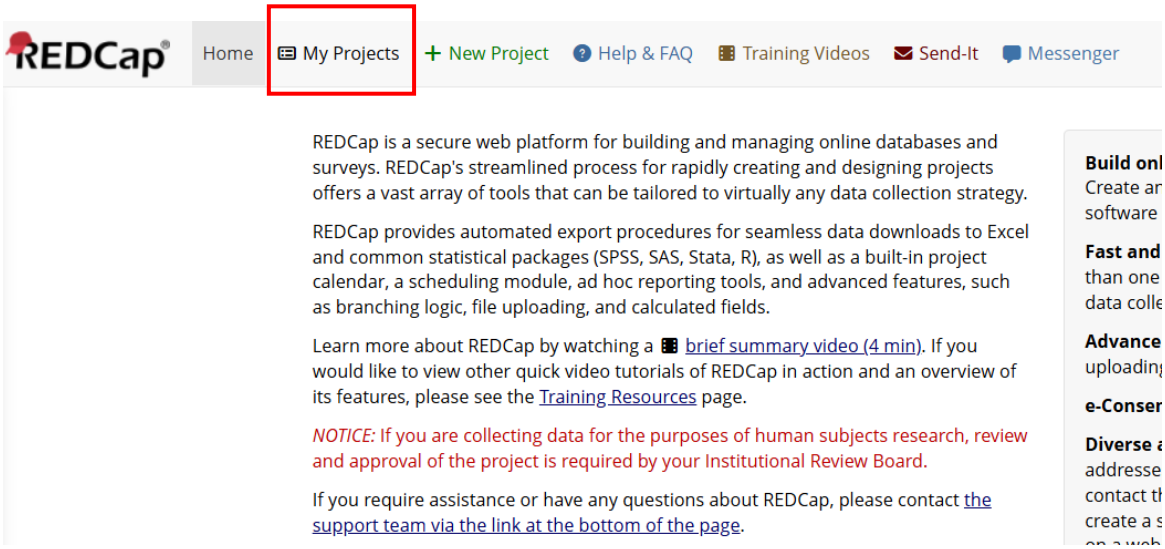

4. You will then be prompted to verify your login using PingID. *PingID is the authenticator app used by Griffith University for the purposes of multifactor authentication.*

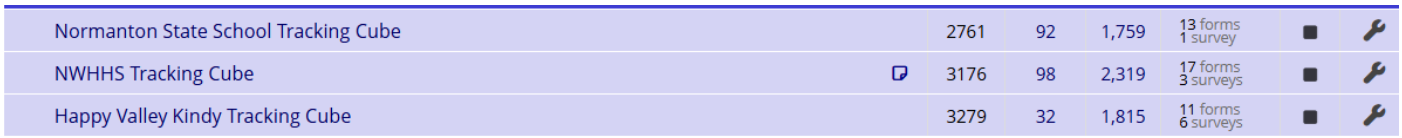

Navigate to the Dashboard

The dashboard is the homepage of the project. On the dashboard you can see all of the participants enrolled in the project as well as an overview of which forms have been completed for the child.

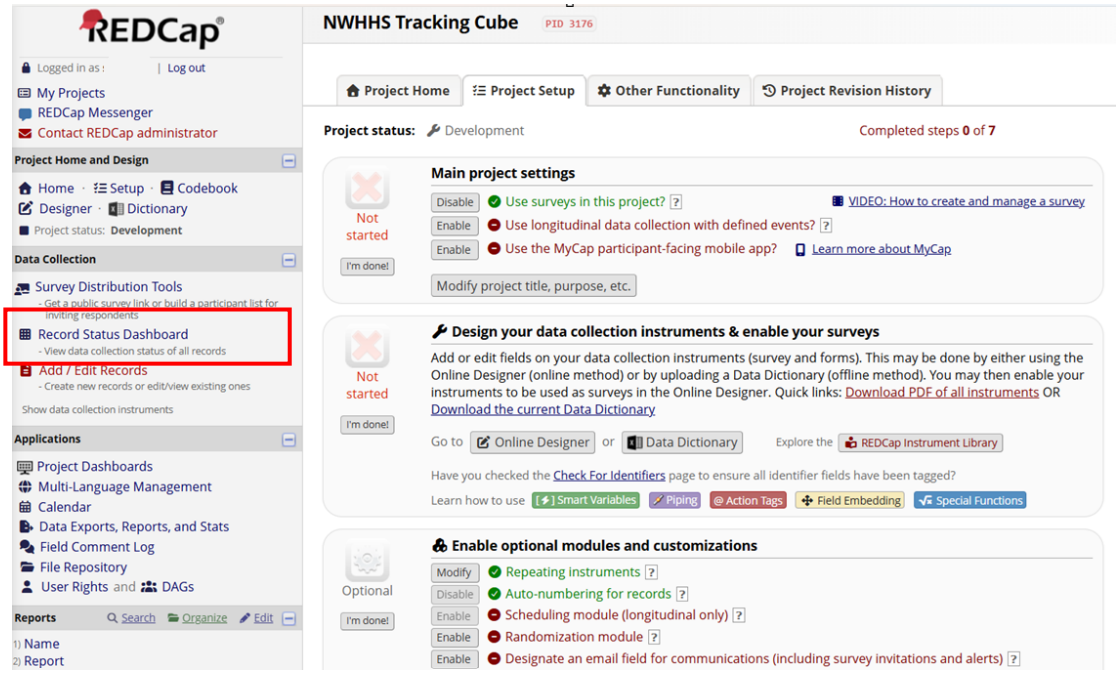

1. To navigate to the dashboard, click 'My Projects' at the top of the screen. *Note: Sometimes after logging in, RedCap may already be on the project screen. If this occurs, skip to the next step.*

2. Locate the project you are working on and click on its title. *Note: you may have access to a single project or multiple projects. All projects you have access to will be visible from this screen.*

3. Navigate to the project dashboard but clicking "Record Status Dashboard" on the left of the screen (highlighted below by the red box)

Understanding the Dashboard

The following screenshot has had participant names removed for privacy. Participant names ordinarily appear beside the participant ID number in the lefthand column.

My Projects will take you back to access a different project.

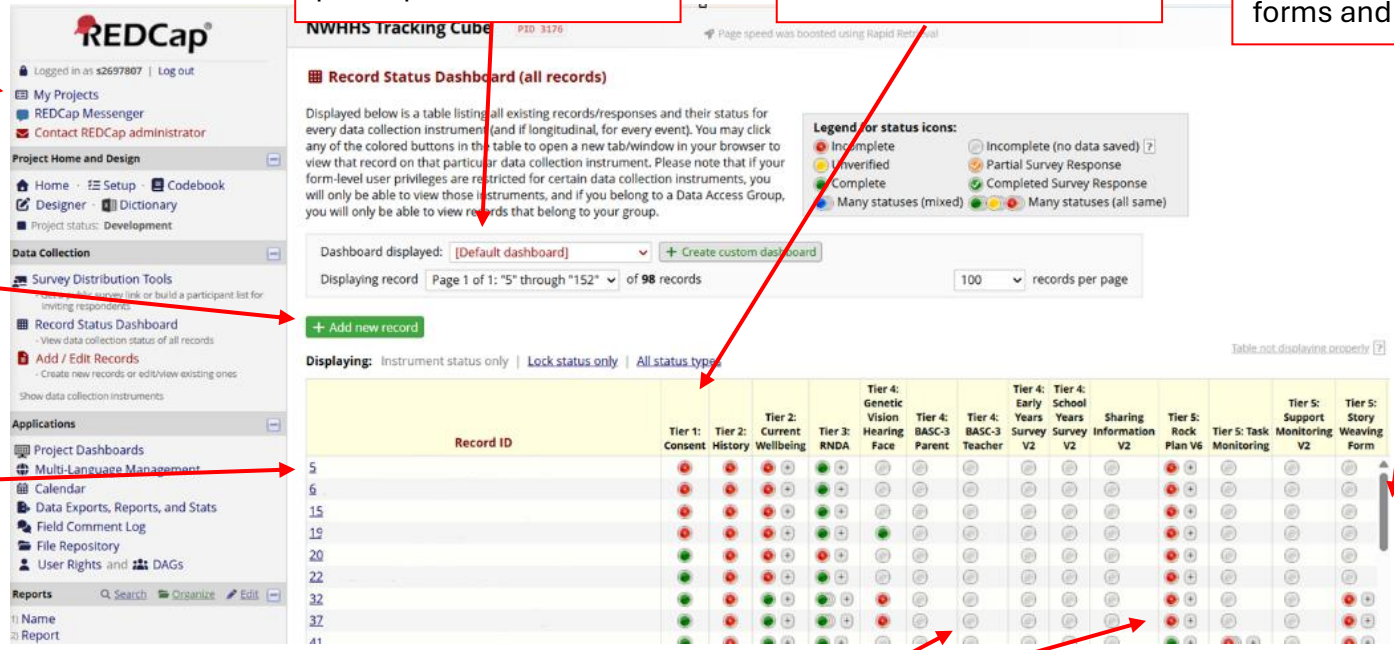

Add new record allows a new participant to be added to the database.

Participant ID number. Click the ID number to open the child's record.

Use the dashboard dropdown to use preset participant filters

The top row of the table displays form names within the database.

Tables can be scrolled up and down, as well as left to right to access more forms and participants

The coloured dots depict form status. More information about this is contained in the Form Statuses section. Click a dot to open that form for the corresponding participant.

Navigating Within a Record

The homepage of a record serves as the homepage for the individual patient. On this page the status of each form for that patient is visible. The image below highlights the most important navigation features within an individual record. *Note: All identifying information has been removed for privacy purposes.*

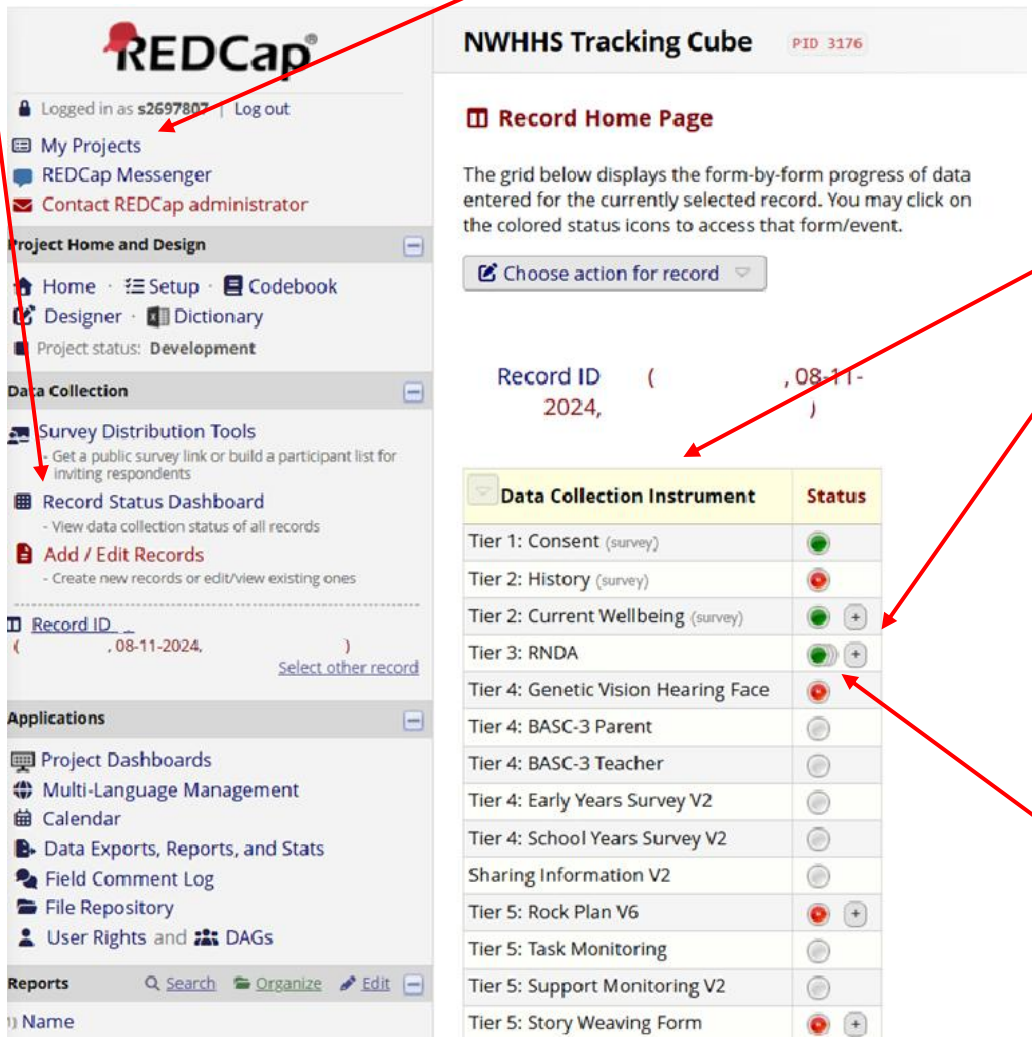

Record Status Dashboard will return you to the home page for your site.

My Projects will return you to the homepage for RedCap.

Form names appear in the left of the table. Form status appears in the right. Click the status circle to open that form.

Click the plus icon to open a new instance of the form.

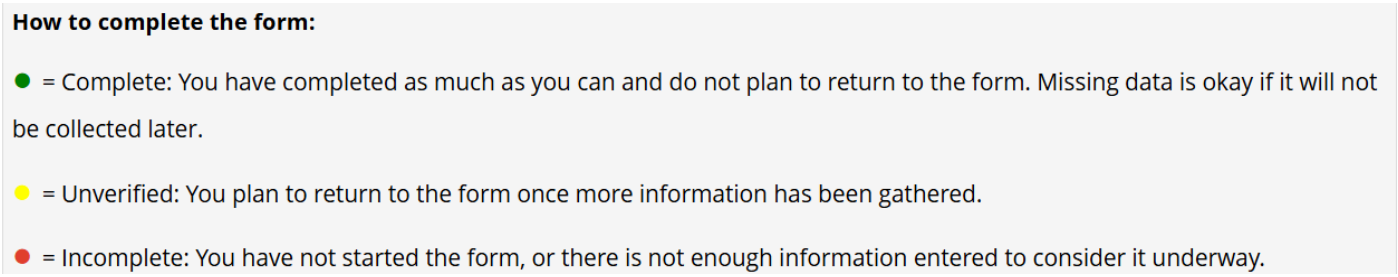

Multiple stacked circles indicates that there are multiple instances of the form within the record. Click the circles to open a table displaying each instance.

Note: Forms with multiple instances are also listed in table format at the bottom of each record. Simply scroll to the bottom of the page to view these.

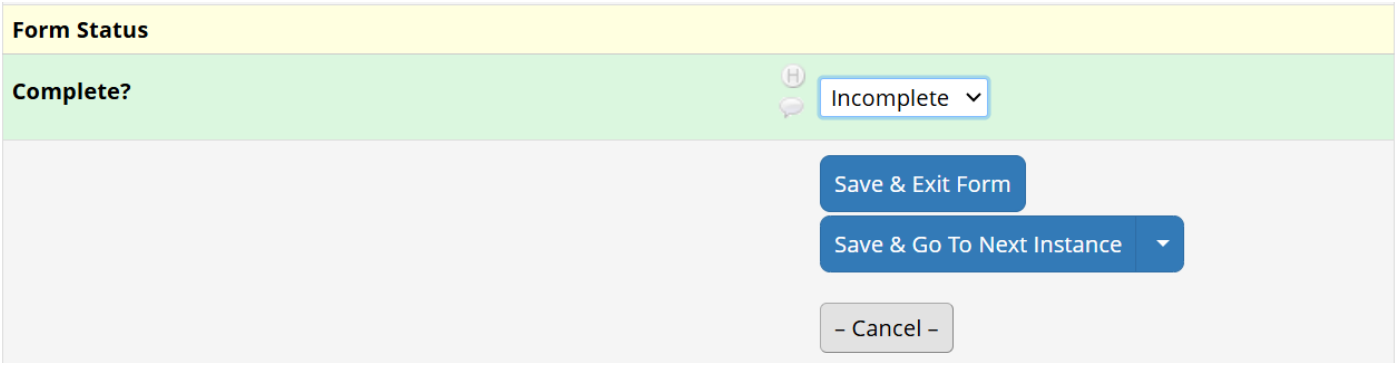

Form Statuses

The colour of the dot on the dashboard corresponds to the status of that form. For example, a green dot means that the form has been completed. Although RedCap defines red as incomplete, yellow as unverified, and green as complete, these statuses are used with slightly different meaning within the Tracking Cube projects. Further information is contained below and is also available at the bottom of many of the forms.

Setting the Form Status

To set or change the status of a form, use the drop down at the bottom of the form to select the appropriate status. You must then save the form for that status to be retained.

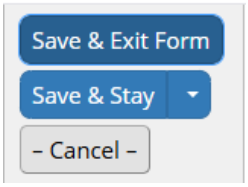

Data Entry

To enter new data or amend existing data, open the relevant form and enter the data into the text fields or select options on drop down menus and options lists.

Important: changes are NOT automatically saved; you must save your work manually for it to be retained.

Saving Data

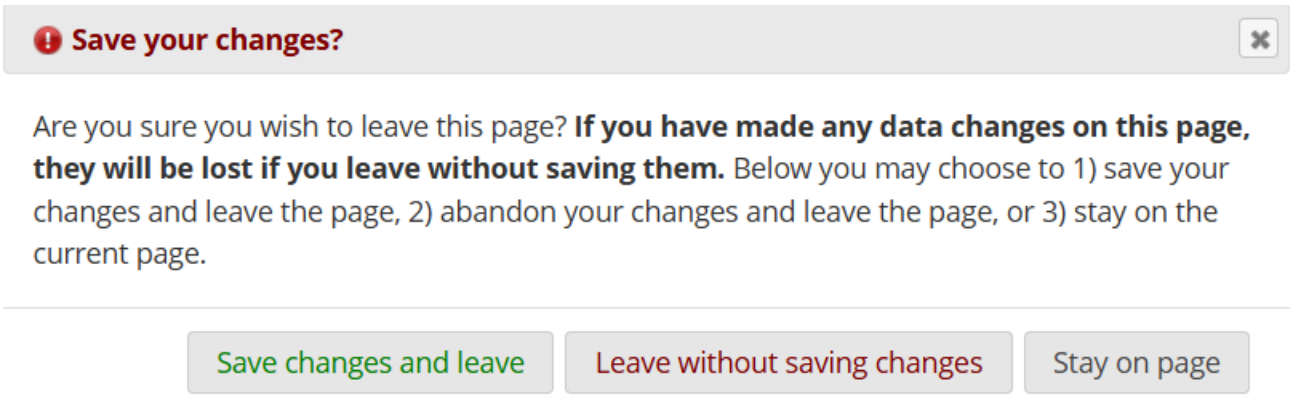

Save options are located at the top right and bottom of every form.

The information below describes the functionality of each of the save options. The options on the grey background can be accessed by clicking the arrow to the right of 'Save & Stay'

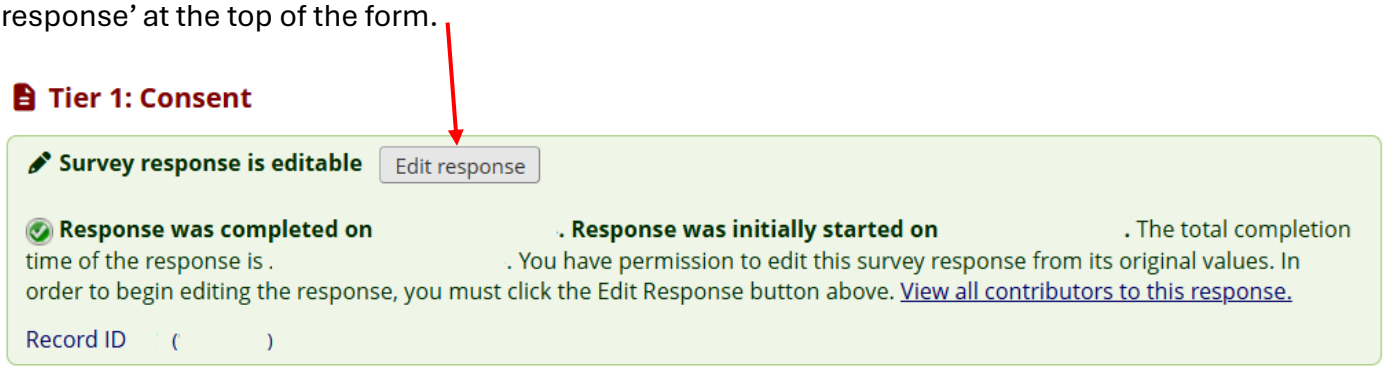

Save & Exit Form	This will save all changes you have made and return you to the homepage for the individual patient.
Save & Stay	This will save the changes you have made and keep the current form open.
Cancel	This will return you to the homepage for the individual participant without retaining any of the changes that have been made.
Save & Go To Next Form	This will save the changes that have been made and open the next form for the same patient.
Save & Exit Record	This will save the changes that have been made and close the patient record.
Save & Go To Next Record	This will save the changes that have been made and open the homepage for the next patient.
Save & Add New Instance	This will save the changes that have been made and open a new form (of the same type) for the same patient. *Note: this option will only be available for forms that allow multiple forms of that type within the same record.*

In addition to the above save options, RedCap will prompt saving if you attempt to navigate away from a form that has had changes made since it was opened. Below is a screenshot of this prompt. ***If you did not intentionally make changes, you should always select 'Leave without saving changes'.***

Editing Survey Responses

On the dashboard, some circles may contain a checkmark  This indicates that the form has been completed via survey. To edit forms that have been completed via survey, you must first click 'Edit response' at the top of the form.

You can then edit or add data to the form's fields as you would with any other RedCap form.

Reminder: you must click save after making any changes you wish to keep.
